Q1. Format the text

CODE

```
words=["This","is","an","example","of","text","justifiction."]
maxwidth = 16
result = []
i = 0
while i < len(words):
    line = words[i]
    j = i + 1
    while j < len(words) and len(line)+ 1+ len(words[j]) ≤ maxwidth:
        line += " " + words[j]
        j+=1
    if j == len(words):
        line = line.ljust(maxwidth)
    else:
        word_count = j - i
        spaces = maxwidth - sum(len(words[k]) for k in range(i,j))
        if word_count == 1:
            line = words[i].ljust(maxwidth)
        else:
            gaps = word_count - 1
            spaces_each = spaces//gaps
            extra = spaces % gaps
            line = ""
            for k in range(i,j-1):
                line += words[k]
                line += " " * (spaces_each + ( 1 if k-i < extra else 0))
            line += words[j-1]
            result.append(line)
            i = j
        print(result)
```

OUTPUT

Error: Execution timeout (>5 seconds) – possible infinite loop

Q2. Replacing characters by alphabets

CODE

```
S = "ghee"
ans = " "
for ch in S:
    f = S.count(ch)
    ans += chr(ord(ch)+ f)
print(ans)
```

INPUT

ghee

OUTPUT

higg
