Level 2 — 5 marks/question

L2-Q1. (M) Starting-Ending

P

CODE

```
arr = list(map(int,input().split()))
target = int(input())
if target in arr:
    print ([arr.index(target),len(arr)-1-arr[::-1].index(target)])
else:
    print([-1,-1])
```

INPUT

```
5 7 7 8 8 10
8
```

OUTPUT

```
[3, 4]
```

L2-Q2. (M) Sort

P

CODE

```
arr= list(map(int,input().split()))
arr.sort()
print(*arr)
print("middle element:",arr[(len(arr)-1)//2])
```

INPUT

```
90 -90 80 66 78 10
```

OUTPUT

```
-90 10 66 78 80 90
middle element: 66
```

L2-Q3. (M) Words-Lines

P

CODE

```
import sys
lines = sys.stdin.read().splitlines()
print("No. of words in lines =",len(lines[0].split()))
print("No. of lines in file =",len(lines))
```

INPUT

```
"Machine learning(ML) is a kind of AI (artificial intelligence) that lets software applications become more precise at anticipating
results without being specifically programmed."
```

OUTPUT

```
No. of words in lines = 23
No. of lines in file = 1
```

L2-Q4. (M) Perfect Square

P

CODE

```
import math
n = int(input())
dp = [0]+[n]*n
for i in range(1,n+1):
    for j in range(1,math.isqrt(i)+1):
        dp[i]=min(dp[i],dp[i-j*j]+ 1)
        j+=1
print (dp[n])
```

INPUT

12

OUTPUT

3
