Q1. Intelligent Customer Feedback Analysis

CODE

```
def preprocess(text):
    text = text.lower().strip()
    text = text.replace(".", "").replace(",", "").replace("!", "")
    return text

def analyze_feedback(feedback):
    positive = ["good", "excellent", "great", "happy", "satisfied"]
    negative = ["bad", "poor", "worst", "unhappy", "disappointed"]

    feedback = preprocess(feedback)
    words = feedback.split()

    pos_count = 0
    neg_count = 0

    for word in words:
        if word in positive:
            pos_count += 1
        elif word in negative:
            neg_count += 1

    if pos_count > neg_count:
        result = "Positive Feedback"
    elif neg_count > pos_count:
        result = "Negative Feedback"
    else:
        result = "Neutral Feedback"

    print("Positive Keywords:", pos_count)
    print("Negative Keywords:", neg_count)
    print("Classification:", result)

n = int(input("Enter number of feedback entries: "))

for i in range(n):
    feedback = input("Enter feedback: ")
    analyze_feedback(feedback)
```

INPUT

```
2
The product is excellent and I am very happy!
The service was bad and I am disappointed.
```

OUTPUT

```
Enter number of feedback entries: Enter feedback: Positive Keywords: 2
Negative Keywords: 0
Classification: Positive Feedback
Enter feedback: Positive Keywords: 0
Negative Keywords: 2
Classification: Negative Feedback
```

Q2. Comprehensive Password Strength Checker**CODE**

```
password = input()

u = 0
l = 0
d = 0
s = 0

for i in password:
    if 'A' ≤ i ≤ 'Z':
        u += 1
    elif 'a' ≤ i ≤ 'z':
        l += 1
    elif '0' ≤ i ≤ '9':
        d += 1
    else:
        s += 1

count = 0

if len(password) ≥ 8:
    count += 1
if u > 0:
    count += 1
if l > 0:
    count += 1
if d > 0:
    count += 1
if s > 0:
    count += 1

if count ≤ 2:
    print("Weak")
elif count == 3:
    print("Moderate")
elif count == 4:
    print("Strong")
else:
    print("Very Strong")
```

INPUT Pujitha@123**OUTPUT** Very Strong

Q3. Structured Server Log Error Analyser**CODE**

```
n = int(input())

logs = []
errors = 0

for i in range(n):
    log = input()

    if log not in logs:
        logs.append(log)

for log in logs:
    if "error" in log.lower():
        errors += 1

print("Unique Logs:")
for log in logs:
    print(log)

print("Error Count:", errors)

if errors == 0:
    print("No Errors")
elif errors <= 2:
    print("Low")
elif errors <= 5:
    print("Medium")
else:
    print("High")
```

INPUT

```
5
INFO: System Started
ERROR: Disk Failure
WARNING: Low Memory
ERROR: Disk Failure
ERROR: Network Timeout
```

OUTPUT

```
Unique Logs:
INFO: System Started
ERROR: Disk Failure
WARNING: Low Memory
ERROR: Network Timeout
Error Count: 2
Low
```

```
print("Medium")
else:
    print("High")
```

INPUT 5
INFO: System Started

56/126

```
INFO: System Started
ERROR: Disk Failure
WARNING: Low Memory
ERROR: Network Timeout
Error Count: 2
Low
```
